Question 3 of 5

What data type is the result of: 10 / 3

code.py

```
result = 10 / 3
print(type(result))
```

A int

float

C double

D decimal

Explanation

In Python 3, the division operator (/) always returns a float, even if dividing two integers. Use // for integer division.

Question 4 of 5
How do you create a dictionary in Python?
A dict = []
B dict = ()
dict = {}
D dict = <>
Explanation
Curly braces {} are used to create dictionaries in Python. Square brackets [] create lists, and parentheses () create tuples.

Score: 4/5

Question 5 of 5

What will this code print?

code.py

```
x = [1, 2, 3]
y = x
y.append(4)
print(len(x))
```

- 3
- B 4
- C Error
- D None

Explanation

Lists are mutable and passed by reference. When y = x, both variables point to the same list object, so modifying y also modifies x.
